

IN THE CLAIMS

Please amend the claims as follows:

Claims 1-20 (Canceled).

Claim 21 (Currently Amended): A method of treating organic pollution on a glass substrate comprising:

treating the substrate with an electrical treatment or a flame treatment to remove at least silicone pollution from the substrate,

wherein said substrate comprises a single or multiple glazing unit comprising monolithic or laminated glass, and a layer comprising photocatalytic TiO<sub>2</sub>.

Claim 22 (Previously Presented): The method as claimed in claim 21, wherein electrical treatment is employed.

Claim 23 (Previously Presented): The method as claimed in claim 22, wherein the electrical treatment is selected from the group consisting of corona discharge, plasma, electric field, and combinations thereof.

Claim 24 (Previously Presented): The method as claimed in claim 21, wherein flame treatment is employed

Claim 25 (Previously Presented): The method as claimed in claim 21, wherein said substrate is hydrophilic and/or oleophilic.

Claim 26 (Previously Presented): The method as claimed in claim 21, wherein said layer of titanium oxide comprises at least partly crystallized in the form of anatase, rutile or anatase/rutile mixture.

Claim 27 (Previously Presented) The method as claimed in claim 21, wherein the substrate is textured with features.

Claim 28 (Previously Presented) The method as claimed in claim 21, wherein the substrate further comprises a layer which comprises at least partly oxidized derivative of silicon selected from the group consisting of silicon dioxide, oxygen-depleted stoichiometric oxides of silicon, silicon oxycarbide, silicon oxynitride and mixtures thereof.

Claim 29 (Previously Presented) The method as claimed in claim 21, which further comprises washing the substrate after the treating.
